NOx SENSOR

Company profile

- 1961** Company established
- 1996** Obtained ISO9001 quality system certification
- 2004** Passed ISO / TS16949, ISO14001 and other system certification
- 2006** Successfully acquired the complete set of equipment and technology of DELPHI spark plug factory of the United states
- 2008** The production capacity and sales of spark plugs both exceeded 100 million pcs, the export sales volume reached 50 million pcs
- 2013** T95 high performance ceramics were put into production in batches
- 2015** Passed Ford Q1 certification
- 2016** Rated as GM global partner
- 2017** The testing center of the company passed the certification of CNAS
- 2018** The testing center of the company passed the certification of CNAS

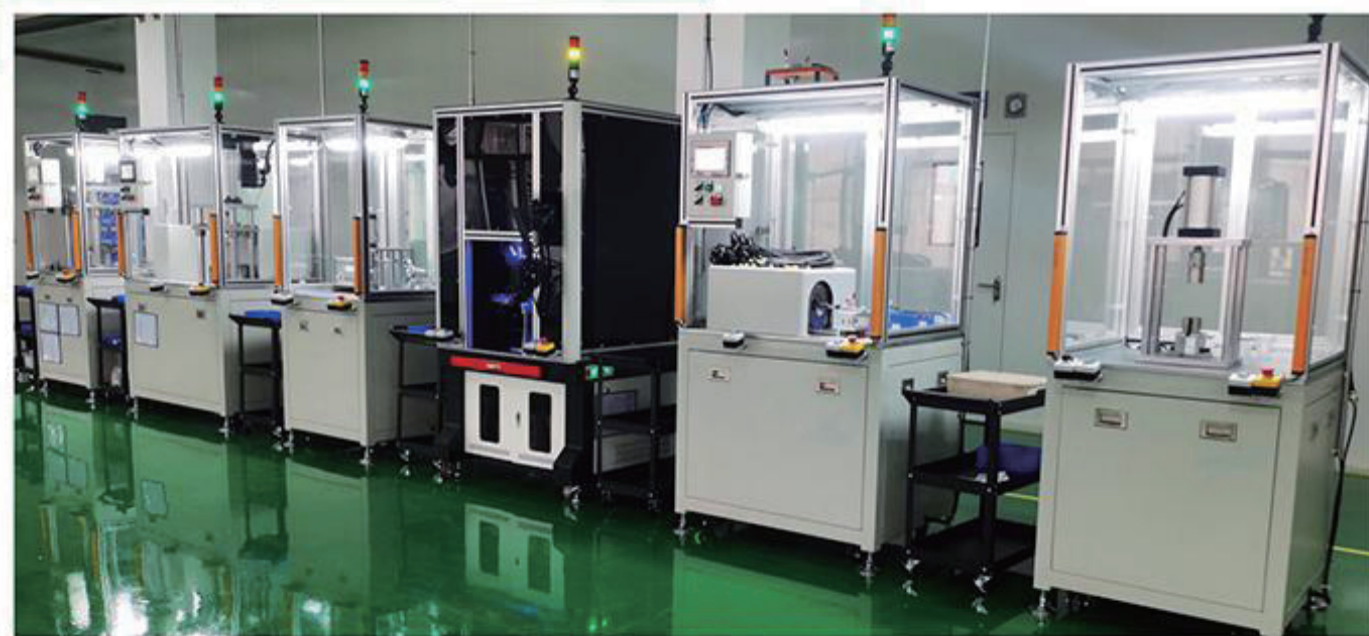

TAKUMI Nox sensor

Based on advanced ceramic technology, our company employed Japanese experts to form a professional R&D team, developed a sensitive Zirconia ceramic chip and assembly lines, independently researched and developed Zirconia ceramic diaphragm, printing paste, introduced the automatic Ceramic Tape Casting Machine, automatic Screen Printing line, German Electrically heated high temperature top hat furnace , etc. to create high-quality and high- performance products to meet customers' needs.

Professional Import Production Equipment

TAKUMI Nox sensor is composed of sensing probe and electronic control unit. It can measure the concentration of nitrogen oxides (mixture of nitrogen oxides such as NO and NO₂) and oxygen in diesel exhaust with high accuracy. It has high induction efficiency and excellent anti-interference ability. TAKUMI's products meet the needs of different diesel vehicles at home and abroad

Common vehicle models:

TAKUMI: HJ24T126

5WK97103A

Suitable for most flat five pin interface vehicle models such as Weichai, Yuchai, Xichai, Yunnei and heavy truck

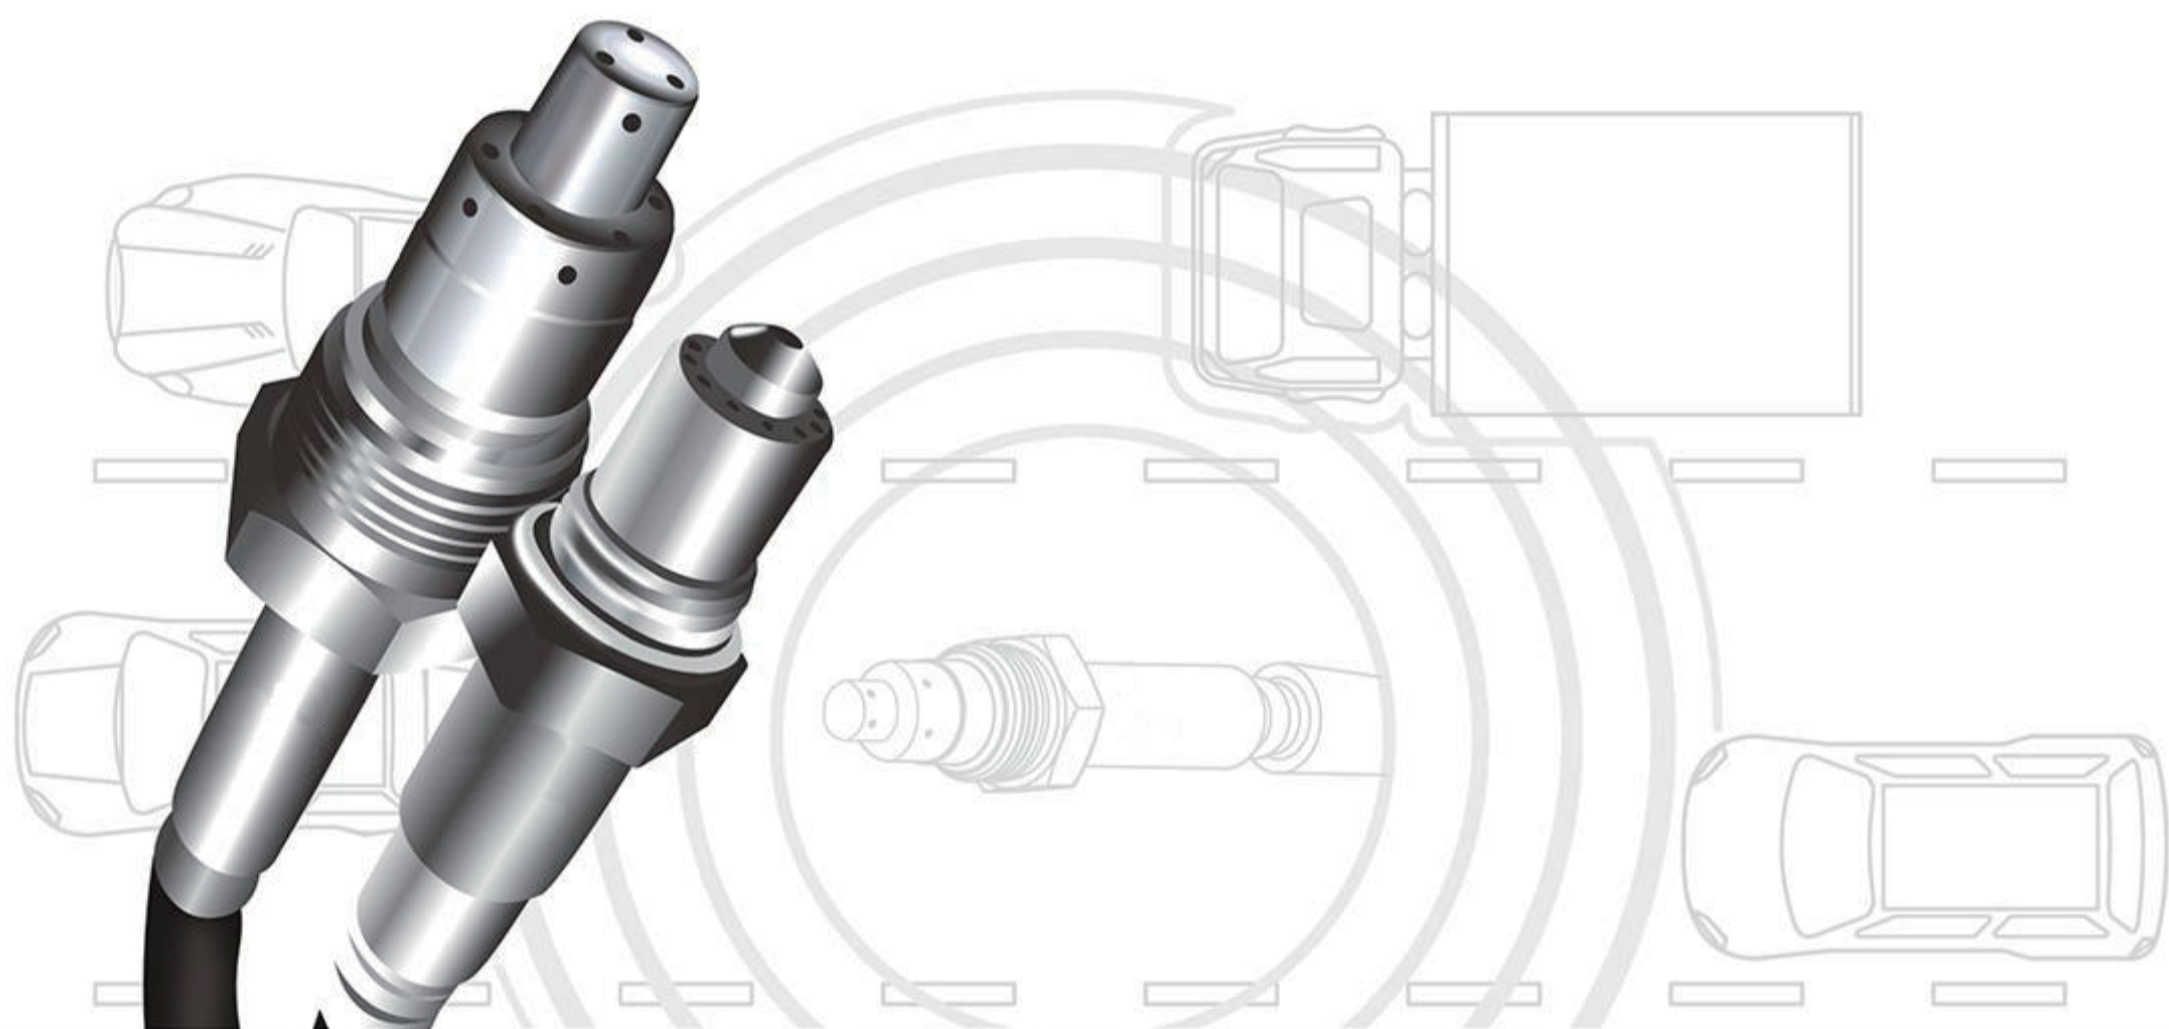

TAKUMI: HJ24H421

5WK96765B

Suitable for most square four pin interface vehicle models such as Foton Auman and Dongfeng Cummins
